VMD

105

Fall 2018

This is my first semester at City College of San Francisco. I haven't taken any Graphic Design class in school before. But I used to play with Adobe Photoshop when I was in high school. VMD 105 is an essential class for students who is interesting in Design Programmes. At first I thought I could take a test to pass this course. But there are many features that I need to know before jump up.

HELLO from the other side

The Raster Final Project was desgined to put many elements as criterias in one frame. I did not have much Design skill at that time. Although, I have been using Photoshop for a while, I still need the fundamental design skill to create a perfect artwork. The color, composition, Typography are very important for me to improve my design skill.

Vector Project “Adobe Illustrator”
First of all, I had no idea about this program
but luckily, I was familiar with some adobe
tools. I was struggle in class until the final
project. However, I think I achieved this
design as the thumbnail draft. I would like to
have a dance studio in the future. So this logo
was create to promote my class.

*The most succesful in this class is Animate
Final Project. Because I get used to
with Vector program. The first story board
wasn't succesful because the movement of the
animate is not what I want. Eventually, the
whole new story really challenged me. More-
over, I enjoyed to work with this program
without stress.*
